

CALIBRATION LABORATORY

Description

High quality calibration is vital in conducting effective tests; CSA Group's new ISO 17025 accredited accelerometer calibration laboratory offers the ONLY reference grade accelerometer calibration (Inc. temp) in the UK, capable of covering 1Hz to 10kHz and a working grade service covering 1Hz to 5kHz with an added temperature option. The addition of this to the existing Leyland ISO 17025 calibration facility expands our service offering to all our internal and external customers, making us a unique testing service in the UK. Our experienced calibration department is not just limited to calibrating accelerometers. They also support all the testing we conduct on a daily basis; enabling each test engineer to operate a successful test, recording effective and data driven results, which are traceable to national and international standards for each and every customer.

Specification

- Reference Grade: 1Hz to 10kHz
- Working Grade: 1Hz to 5kHz
- Temperature: -50°C to 150°C (20Hz to 630Hz)
- Shock: 20 to 5000g

Other Calibration:

- Electrical
- Pressure
- Temperature
- Torque
- Force
