## Description

CDAS Advanced / Elite is a suite of programs that collects and processes emissions data for display and reporting purposes. The program collects data from instruments using Ethernet communications every five seconds, storing data on the hard drive each minute.

Raw data can be corrected to standard reference conditions and to a reference O2 concentration. Calibration functions from EN14181 - QAL 2 and confidence limits can also be applied. Averages are calculated for 10, 15, 30 and 60 minute periods and the daily average.

The on-screen display is completely customisable and can consist of data grids, gauges, real time trends and digital status indicators.

Alarms can be configured against any calculated value which can be displayed on screen and trigger external signals. Daily reports can be generated showing period averages and the daily average of selected parameters.

## General Notes

1. This certificate is based upon the equipment tested. The Manufacturer is responsible for ensuring that on-going production complies with the standard(s) and performance criteria defined in this certificate. The manufacturer is required to maintain an approved quality management system controlling the manufacture of the certified product.
